

Senior Wireless Design Engineer

Job Description

We are currently recruiting for a Senior Wireless Design Engineer for our bustling design team in our Limerick in office. While the majority of our work is within the telecommunications sector, we would like the successful candidate to have a broad experience, be team players and have a proactive approach.

The candidate will be joining an already very experienced team of talented individuals with expertise across multiple engineering disciplines.

Reporting to

Project Manager

Role and Responsibilities

The main responsibilities of the role will include:

- Implementing client and company design standards across the project team
- Leadership of the project design team
- Liaising with Project Manager to manage workflow and resource requirements
- Ensure customers' expectations are fulfilled & build confidence & trust
- Interrogate & continually improve project processes
- Keep abreast of technology advances
- Apply new technology in an innovative way to create new services and streamline delivery processes
- Mentor designers and identify training needs
- Collaborate with clients to enable them to maximise the value of their infrastructure
- Creating site designs for various site types (Greenfield, Rooftop, Co-Location)
- Quality control of drawings

As a senior engineer you will be expected to manage the design team to ensure effective solutions are produced across a multitude of environments. We believe that these are exciting opportunities to join a dynamic company in the field of telecommunications and to help drive it forward.
